Tag! You're It

Display RFID tags in Style: A User Manual

Delan Elliot | Juliana French
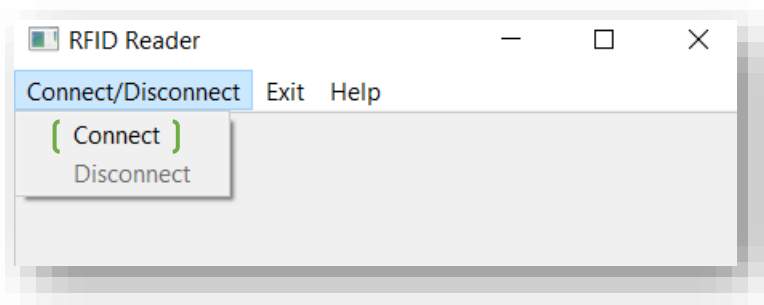

COMP3980 OCT 17, 2017

Getting Started

To experience full functionality, you will need:

- a Skyetek RFID reader device
- the USB connector cable
- RFID tags to read

Before running the program, you should connect the reader to your computer with the USB cable.

Using the Program

1. Start the program from the *.exe*.

2. In the menu, click on "Connect/Disconnect" and select "Connect" to connect to the reader.

3. To read an RFID tag, place one (or a few) on or very near to the reader. Check the screen; the tag(s) within range of the reader should display.

All unique tags that have been read previously will persist on the screen.

4. To disconnect, select "Disconnect" from the "Connect/Disconnect" menu.
